Occupational Safety and Health Statistics

Introduction

Statistics in this section provide information and analysis on work-related accidents and occupational diseases in Hong Kong. They also provide recent accident trends by economic sectors and selected industries. Employers, employees and occupational safety and health practitioners may use them to measure the performance in their own organisations against the overall accident rates and the industry average. We hope that such information will help individual establishments manage their occupational safety and health programmes better and improve their safety performance.

Definitions and further information

Occupational injuries (including industrial accidents) are injury cases arising from work accidents, resulting in death or incapacity for work of over three days, and reported under the Employees' Compensation Ordinance.

Occupational injuries include reported cases outside the jurisdiction of the Occupational Safety and Health Ordinance, e.g. cases of natural diseases and cases happened outside Hong Kong.

Industrial accidents refer to injuries and deaths arising from industrial activities in industrial undertakings as defined under the Factories and Industrial Undertakings Ordinance.

Occupational diseases are the confirmed occupational diseases reported under the Employees' Compensation Ordinance, the Occupational Deafness (Compensation) Ordinance and the Pneumoconiosis and Mesothelioma (Compensation) Ordinance.

Injury rate per 1 000 employees is calculated by:

$$\frac{\text{Number of occupational injuries}}{\text{*Employment size}} \times 1\,000$$

Accident rate per 1 000 workers is calculated by:

$$\frac{\text{Number of industrial accidents}}{\text{*Employment size}} \times 1\,000$$

* Figures of employment size are based on the Quarterly Report of Employment and Vacancies Statistics published by the Census and Statistics Department.

The components that form the statistics may vary from country to country in respect of the legal requirements in the reporting of accidents and occupational diseases, the economic sectors covered and the definition of workforce. Accident and occupational disease statistics of different countries may not be directly comparable and should therefore be interpreted with care.

Note :

Since 2009, the Quarterly Survey of Employment and Vacancies conducted by the Census and Statistics Department has been enhanced to adopt the Hong Kong Standard Industrial Classification (HSIC) Version 2.0 to replace the HSIC Version 1.1 in compiling the statistics on the number of establishments, persons engaged and vacancies. Thenceforth all the statistics contained in the Quarterly Report of Employment and Vacancies Statistics are in HSIC Version 2.0.

The OSH statistics from 2009 onwards are compiled based on HSIC Version 2.0 and may not be strictly comparable to those published previously under HSIC Version 1.1.
